Warrant for Annual Meeting

THE STATE OF NEW HAMPSHIRE.

To the Inhabitants of the Town of Wilton, in the County of Hillsborough, in said State, qualified to vote in Town Affairs.

You are hereby notified to appear at the town house in said Wilton, on Tuesday, the tenth day of March, next, at nine o'clock in the forenoon, to act upon the following subjects :

1. To choose all necessary town officers for the year ensuing.
2. To raise such sums of money as may be necessary to defray town charges for the ensuing year, and make appropriations for the same, including support of schools, maintenance of poor, for repair of roads and bridges, for Memorial day, for lighting streets, and miscellaneous expenses.
3. To hear the reports of all agents, auditors, committees, and all other officers heretofore chosen, and pass any vote in relation thereto.
4. To see if the town will grant the free use of the town hall on Memorial day and evening to Abiel A. Livermore Post, G. A. R.
5. To see if the town will vote to grant the free use of the town hall Friday afternoon preceding Memorial day for Memorial Day exercises of the public schools, and one evening to the high school graduating class.
6. To see if the town will grant the free use of the town hall and supper room one evening in the year, to the fire department, for its annual party.

7. To see if the town will vote to raise and appropriate \$1500, being \$30 each for fifty hydrants, or any other sum to the credit of the water works for hydrant service.

8. To see if the town will vote to adopt the provisions of Chap. 29, Sec. 3, of the laws of 1893, as amended by the laws of 1913, relative to the election of road agent.

9. To see what sum of money the town will raise and appropriate for the care and maintenance of the water system.

10. To see what sum of money the town will raise and appropriate for the care and maintenance of the sewer system.

11. To see what sum of money the town will raise and appropriate for the flushing of the sewer system.

12. To see what sum of money the town will raise and appropriate for the purchase and installation of water meters.

13. To see what action the town will take in relation to necessary repairs at the reservoir, and raise and appropriate money for the same.

14. To see what action the town will take in relation to refunding the water bonds, due May 1st, 1915.

15. To see if the town will vote to purchase of F. L. Frazer, a parcel of land, containing about two acres, with mill buildings thereon, for the purpose of purifying the town water supply, or take any action relating thereto,

16. To see what sum of money the town will vote to raise and appropriate for the care and support of the public library and library building.

17. To see what sum of money the town will vote to raise and appropriate for the suppression of the moths.

18. To see what sum of money the town will vote to raise and appropriate for the care and maintenance of permanent roads, constructed with state aid.

19. To see what action the town will take in regard to allowing a discount on taxes.

20. To see if the town will vote to replace the wooden bridge on the Temple road, near the residence of Nathan Barker, with a permanent structure, also any other bridges which may need rebuilding, to meet the requirements of Chap. 76, Sec. 3, of the Public Statutes, as amended by the Acts of 1913, and raise and appropriate money for the same, or take any action in relation thereto.

21. To see if the town will vote to purchase any road building machinery, and raise and appropriate money for the same, or take any action relating thereto.

22. To see if the town will vote to raise and appropriate the sum of \$2,837.63 in addition to the unexpended balance in the town treasury, as the town's share of a joint fund for the construction of the Cross State trunk line highway, so-called.

23. To see if the town will vote to widen and straighten the highway between the dwelling house of Charles E. Sheldon and the dwelling house of John J. Gibbons, and raise and appropriate money for the same.

24. To see if the town will instruct the Selectmen to make a contract for street lighting with the Milford Light & Power Company for a term of ten years, or take any action in relation thereto.

25. To see if the town will vote to authorize the Selectmen to borrow money in anticipation of taxes, if necessary, as provided by the law of 1907.

26. To transact any other business that may legally come before said meeting.

Given under our hands and seals, this twenty-first day of February, in the year of our Lord nineteen hundred and fourteen.

JOHN F. HERLIHY,
GEORGE M. BATCHELDER,
GEORGE W. BEAN.
Selectmen of Wilton.

		<u>\$295 23</u>

Clearing land in Laurel Hill cemetery:

Granville Stearns, removing stumps	\$100 00	
" " closing land	30 00	
W. F. Wood, team and labor	16 50	
		<u>\$146 50</u>
		<u>\$441 73</u>

Mount Calvary Cemetery:

Received from R. M. Moore, town treasurer	\$100 00
Expended as follows:	
John Gibbons, removing stumps	\$100 00

It will be seen by the foregoing statement that

\$146.50 was expended for clearing land in the upper corner of the cemetery.

The grounds of the various cemeteries have been well kept, and are in an improved condition. There are no outstanding bills contracted by the committee. All of the income from the special deposits for individual lots has been expended as seemed necessary, and all of these lots are in good condition.

The committee have been able to keep their expenditures within the amount appropriated and suggest that the sum of \$400.00 for the general care of the cemeteries be raised, and in addition that a sum of \$100.00 be raised and appropriated for permanent roads and for the general improvements in Mt. Calvary cemetery, said sum to be expended under the supervision of the cemetery committee. The above appropriation of \$400.00 will be sufficient to provide for the constant services of a caretaker during the summer months, which the committee advises.

Respectfully submitted,
DAVID WHITING,
GEO. G. TOLFORD,
JOHN E. FITZGERALD,
Cemetery Committee.

WATER COMMISSIONERS' REPORT

The water system of Wilton is on the eve of its tenth anniversary, and we believe it the proper time to learn something from the past to guide us in the future. With that idea in our minds, we present the following facts and figures.

THE AVERAGE RAINFALL

Since the water works were built we quote as follows : The average rainfall here in Manchester as kept both by the Amoskeag and also by the Water Board for the past 38 years is 38.79 inches. Since 1900 the annual record is as follows :

1900, 50.95 inches	1907, 40.77 inches
1901, 48.09 "	1908, 32.09 "
1902, 51.77 "	1909, 37.14 "
1903, 41.55 "	1910, 33.73 "
1904, 39.02 "	1911, 35.66 "
1905, 38.38 "	1912, 38.92 "
1906, 37.61 "	1913, 34.57 "

You will see by this record that since the installation of your water system the average annual rainfall has been a good deal below the average for a long term of years, and far below the normal rainfall. In only two years has it approached even the average, and in other years it has been far below it.

NATURAL LIFE OF WATER SYSTEMS

The natural life of a water system is a somewhat complicated problem to solve. The various component parts each in itself has a longer or shorter term of usefulness. Those entering into a gravity system average a much longer life than those in a pumping system. The cast iron mains are usually expected to render efficient service for 100 years. When they do fail it is usually from filling up with scale on the inside rather than from rust or corrosion. The chemical composition

of the water has a whole lot to do with this scaling business. Your water is in this respect better than the average.

Hydrants and gates are usually given in estimates a life of fifty years, in many cases, however, they are now doing good service at a greater age. Service pipes and their accessories are never estimated to be worth much after 20 years in use, but their life varies greatly. We have known service pipes to need replacement inside of a dozen years, and on the other hand have seen them taken out after being in service more than twice as long when it was apparent that they might have been useful for a longer time.

In the management and maintenance of a water system the renewals are extended over the whole time of its service, coming at more or less regular intervals, so that at no time could it be classed as obsolete.

EVAPORATION

The National Meter Company says this in regard to evaporation.

"The following figures show evaporation of water at Boston during the several months of the year:

Evaporation in Inches

Jan.	Feb.	Mar.	Apr.	May	Je.	Jly.	Aug.	Sept.	Oct.	Nov.	Dec.	Year
0.96	1.05	1.70	2.97	4.46	5.54	5.98	5.50	4.12	3.16	2.25	1.51	39.20

"The evaporation from any particular watershed is dependent on the temperature, the humidity, the altitude, the area of the watershed, and the area of the water surface on it. The evaporation is dependent also on the wind velocity, the inclination or slope of the watershed, its geological character, its forest cover, and its state as regards cultivated areas. The total amount of evaporation is also dependent on the rainfall, and varies with it. The distribution of the rainfall throughout the year greatly influences the evaporation; a heavy winter and a light summer rainfall will together show a small annual evaporation.

"In the Atlantic states it may be said that the annual evaporation from land surfaces is about 45 percent and that from water surfaces about 60 percent of the annual rainfall, so that about one half of the rainfall reaches the streams and may be utilized."

SOURCES OF SUPPLY

During the summer of 1913, the Gaerwen Falls brook, late in the season, became dry, as did Miller and Blood brooks, showing there was no advantage had the town chosen these other sources. We quote Mr. Stanley Abbott, who measured the flowage of Stockwell brook, as follows:—

"I went on Saturday, July 26th, to the temporary dam on the Stockwell brook and measured the flowage as follows: I procured a cask, which was found to hold exactly 30 gallons. I prepared a short sluice, which guided the overflow at the spilling, so that it would fall wholly within the cask whenever the latter should be placed beneath.

"This was done repeatedly, while carefully noting the progress of the second hand of a watch, with the result that the cask was filled in 17 seconds. I am sure that no one of the trials exceeded this time.

"So that it is safe to state that the flowage over the spill is not less than 105 gallons per minute. The work was done between 12 m. and 1 p. m., when evaporation would be at maximum. It will be noted that this discharge per minute—6,300 gallons per hour, or 151,200 gallons per 24 hours."

During the dry spell of 1913, the State Board of Health allowed the use of either Stockwell Brook or Burton Pond as an emergency supply only. A temporary dam was erected at Stockwell brook, where was placed a gasoline engine and pump, and the water mains thus filled, later Burton Pond was tapped, and a full supply for fire and domestic purposes was secured through the courtesy of Dr. Frye.

THE CONCRETE DAM

There being some question as to the durability of the concrete dam the following report was solicited from Mr. Dudley:

"On June 13 I made an examination of the water and sewer systems in your town, and make the following recommendations to remedy existing unsatisfactory conditions. The water system will be first considered, and the first item is the dam at Gaerwen Falls. This

dam was built by the Amberson Hydraulic Construction Co. In its construction at least two vital mistakes were made. 1st. An unsatisfactory brand of cement was purchased and used for the first work. After it was found that the concrete made with this cement did not set satisfactorily, the buttresses in which it was used were taken out. But the retaining walls were not. These walls have since crumbled on the exposed surfaces, and particularly on the corners, and are unsightly if not unsafe. The wall on the crest of the dam at the west end, contrary to the advice of your engineer, was built with a perpendicular up stream face instead of with one with considerable batter. And this as was expected cracked and also cracked the deck of the dam. Attempts have been made to repair this but it is still unsatisfactory. A considerable crack has developed in the gate house wall or foundation, and the whole structure needs thorough renovation. This however should not be attempted until such a time when some temporary arrangement can be made to keep up the supply of water in the mains, and then a thorough job should be done. All loose and poor material should be removed, and a supplementary face put on the east retaining wall, the deck of the dam and the inside of the wall on top of the west end of the dam. The toe of the dam should be carefully examined for any small leak or seepage through possible seams or cracks in the foundation stone, and every other precaution taken to insure perfect tightness. This work should be intrusted only to a man skilled in such work and the concrete and other materials used should be of the very best. The leak in the gate chamber if it can be definitely located can probably be stopped by cleaning out to solid work any seams or cracks in the foundation or in the wall and after they are perfectly dry and clean filling them with hot Trinidad Asphalt."

FLUSH TANKS

These tanks, being supplied by the water system, are presented in this connection.

This sewer system, built to exclude surface drainage, depends for its success on the automatic tanks, which are quite a drain on the water supply. There

are 17 tanks and figuring they dump ten times in 24 hours, they will use 1,551,250 cu. ft. a year, which would cost approximately \$1,500.00 for that time for water.

The above subjects have been brought before this board and we have endeavored to explain them, and any further information desired will be gladly furnished.

STARR B. CENTER,
E. J. HOPKINS,
JOSHUA F. FRYE,
Water Commissioners.

EXPENDITURES FOR THE YEAR 1913

Number of connections previously reported, 265.

Number connections added during the year, 5.

GENERAL EXPENSE AND CARE OF WATER WORKS SYSTEM

Paid S. B. Center, services as commissioner	\$ 25 00
E. J. Hopkins, services as commissioner	50 00
Joshua F. Frye, services as commissioner	25 00
Town of Wilton, rent of room	50 00

Sewer Commissioners.

REPORT OF LIBRARY TRUSTEES

D. E. Proctor, President.

George E. Blanchard, Sec'y and Treas.

George E. Bales, Daniel Cragin, David Whiting, George

G. Blanchard and D. E. Proctor, Trustees.

Mary N. Abbot, Librarian ;

Bessie F. Bales, Asst. Librarian.

Warren P. Putnam, Janitor and Custodian.

Last year we were voted five hundred dollars by the town for the use of the library, but not having expended the same, we have decided to let it remain in the town treasury to be disposed of as the town may decide. We, however, desire to ask for the same amount this year as an emergency fund as the steady growth of our library toward the ten thousand volumes mark means more shelf room in the near future and also there is a probability of a forced change in the lighting plant. Our apology in not having the Lewis donation in proper shape is that there is a cash gift not yet paid for the purpose of properly arranging and displaying the same. The trustees would recommend to the consideration of the people of the town the idea of purchasing an album or albums in which to place cabinet photographs of the men and women living or passed on who have made Wilton so good a place for a home with a short sketch of their lives, "Lest we forget." And those willing to donate photographs are assured they will be thankfully received and preserved. Time flies, and the last forty years has seen more people passed to that borne from which none return than are now living in town today. A westerner who has made a donation of his war relics to the library of his city, wrote me : "Perhaps you wonder why I gave

these things to the library while I was still alive. I will tell you. Now I know exactly where they are and where they will be, and they wont be scattered broadcast under the auctioneer's hammer should the surely, suddenly happen to me."

We thank you all for your kindly interest in the library and trust that you all may get all the benefits possible to obtain from it and that our scholars will find it a great help in their school work.

Respectfully submitted,

D. E. PROCTOR,

For the Trustees.

REPORT OF LIBRARIAN

The Twenty-fourth Annual Report of the Librarian of
the Wilton Public Library for the year
ending Feb. 15, 1914.

SCHOOL CALENDAR

1914 and 1915

SPRING TERM

High School, 11 weeks from Monday, April 6, to Friday,
June 19, 1914

All other schools, 10 weeks from Monday, April 6, to
Friday, June 12, 1914

FALL TERM

All schools 14 weeks from Tuesday, Sept. 8 to Friday,
Dec. 18, 1914

One week recess at Thanksgiving

WINTER TERM

All schools 11 weeks from Monday, Jan. 4, 1915, to
Friday, Mar. 19, 1915

NO SCHOOL SIGNALS

Three long blasts of the whistle of not over five seconds duration each, sounded twice, --- 10 seconds --- given at 8 o'clock A. M. indicates that there will be no sessions of schools for that forenoon, the same signal given at 12:30 P. M. governs afternoon sessions.

REPORT OF SCHOOL BOARD

The aim of the school officers in preparing their annual report to the citizens of the town would seem to be, first, to answer such questions regarding the management of the schools and their equipment during the past year as would naturally occur to the towns people.

Second, to briefly state the condition and needs of the property of the district.

Third, to bring such suggestions in regard to future policies as should be considered by the citizens in interest of the common welfare.

The district is now maintaining in addition to the high school and five grade schools in the village, schools at Davisville, Abbot Hill, and the so-called "Shedd school" in Milford for pupils in the southeast corner of our own town.

Among the most perplexing questions our Board has to decide are those as to how best to arrange school facilities for children situated in the remote parts of the town. To anyone who may feel that there should be more concentration, and fewer schools to support, we would say that we have not found it possible to reduce the number of schools by hiring pupils transported, without incurring altogether too much expense. While this is successfully done in various other towns, our situation as to high hills and deep valleys is unfavorable in this respect.

As denoting the somewhat changing opinion on this subject, Supt. Morrison lately said at Manchester, addressing a conference of school boards, "Your question should be not, 'can we dispense with a certain school?' but 'Can we profitably maintain it?'" And again, "A well handled rural mixed school may be the equal of any one grade school."

Our supervisor, Mr. Rich, has brought fresh plans and active interest to the work, and has rendered service of unquestioned value. The Southern N. H., Teach-

ers' Registry, under his management, has been of good use in securing teachers at trifling expense.

The vocal music has been under the worthy charge of Miss Agnes Garland of Henniker, N. H., whose report is found elsewhere.

We would repeat our belief that we have an excellent teaching force, whose loyalty and diligence are manifest.

Although our High school enrollment is somewhat less than last year, it continues to be fully equal to the convenient capacity of the room. The building now needs new flooring in the gymnasium, and must have the outside woodwork painted.

The condition of the various outside school houses is fairly good, all of them in use having been painted within three years. During the past year various minor repairs have been made.

There is a growing feeling that schools should become vocational, and teach girls domestic science and boys agriculture and mechanic arts. We believe the subject is worthy of careful study as to how much can be done along these lines under our circumstances and resources.

The movement to make education practical is growing. The modern text books show this in marked contrast to those of the past decade.

We take occasion to thank all who assisted in forwarding supplies and in other ways helped our work, and would again urge that parents and others take more pains to visit the schools and thus gain a just idea of the work, methods, and needs.

Respectfully submitted,

STANLEY H. ABBOT,

R. M. MOORE,

JESSIE L. HATCH,

Wilton School Board.

REPORT OF TRUANT OFFICER

To the School Board of Wilton, N. H.

I herewith present my report of services as Truant Officer for the year ending Feb. 15, 1914.

I have been called to look after ten cases of truancy, the past year, and as in the previous year, most of them were in the fall and spring terms.

In most instances the children have been kept at home to work, but in a few cases it has been a desire on the part of the children to stay away, and their parents supposed that they were in school. In all cases I have placed the children in school, and they have attended regularly since.

I have endeavored to have the parents understand that there is a heavy fine imposed for keeping children from school without sufficient cause, and think that the moral effect has been good.

WARREN P. PUTNAM,
Truant Officer.

REPORT OF THE SUPERINTENDENT

To the Wilton School Board:

In submitting this report of my work as school superintendent for the year 1913-14 I have thought it advisable to bring to your attention briefly some things that have been done on the new schedule of work, the equipment, the scholastic work of the schools, teachers' meetings and other helps, a registration bureau, parents' associations and data collected from the teachers and to include brief reports of the principal of the high school and the supervisor of music.

A New Outline.

Among the recommendations of last year we mentioned the need of an outline of work which would make it possible for each pupil, even in the rural schools, to pursue a steady progressive course from year to year, and yet enable the teacher to combine classes so as to make five, instead of eight, the maximum number of divisions in any school. Such a schedule has now been prepared, printed and placed in the schools as a working outline. Copies will be furnished to parents who are interested. This pamphlet lists all the books and topics to be covered in a given period. It provides against the omission of important material or the needless repetition of books or subjects already mastered, regardless of changes in school or teachers. When marked by the instructor it becomes a report showing where each class stands in the course, and what remains to be done. Such reports are sent in by all the teachers from time to time and show definitely what each school is doing. The writer believes this work to be of real importance, as it puts the work of the grades for the first time on an orderly and systematic basis.

Equipment.

To provide a complete equipment of books, a good deal of new material has had to be purchased this year. A few new kinds have been added, but in most cases we have had to fill out our stock of kinds already in use. Paper and other supplies have been bought in one lot from the lowest bidder.

Among the new introductions in text books we have the Stone-Millis algebras and geometries, which mark a long step forward in applying high school mathematics to common things within the students' experience, Clark's General Science,

which does the same thing for the first year science instruction. In the grades we have added a few Stone-Millis arithmetics in some schools, a few Spaulding-Miller spellers, the Woods-Hutchinson physiologies and some new supplementary reading.

With the installation of screens or jackets for stoves, a sanitary seat with spring hinge for boys' closets, sanitary cans (ordinary milk cans) for drinking water, tea-kettles to warm water for washing and to moisten the air of schoolrooms, an additional supply of wall maps, and a little more blackboard, we shall have in our rural buildings practically everything recommended by the State Department in the "Suggested Minimum Schoolroom Equipment for Elementary Schools." The jackets, seats and maps are already bought or ordered.

A great deal has been done and is being done by teachers and pupils in the way of rebinding and repairing books. All books are given a coat of spar varnish on the outside, which makes them germ and waterproof and prevents a large part of the soil which is one great objection to the free text book system.

Scholastic Work.

A change in the high school curriculum made this year is a step toward making the course more practical and more in line with what the pupils can actually use. A course in general science in the Freshman year gives the students an insight into some of the most important scientific principles and appliances that are in use about them.

A course in modern European history is intended to make pupils as familiar with and as interested in great men and events of Europe in the last hundred years as we have formerly tried to make them concerning the ancient Greeks and Romans and Egyptians.

First year Latin has been taught in the high school this year by the "direct method" and the increase in interest and proficiency is decidedly apparent.

Especial emphasis is placed on English as one of the principal subjects in all grades, with the result that most of our schools show a substantial improvement in each class over the work done by their predecessors. Much remains to be accomplished, however, to bring our pupils up to the standards of style and technic that are found in the best schools elsewhere.

At the beginning of the year the Palmer method of writing was adopted and manuals for all pupils purchased. These have been distributed as fast as the teachers themselves have mastered the first exercises. An important part of the system is the correspondence course for teachers. Most of ours have sent in a number of their own drills but to make the system an

entire success throughout the schools, all grade teachers employed next year should be holders of the writing certificate.

The employment of a music supervisor has done much to bring up the standard of the work in that subject. A little money made on two or three talking machine concerts has enabled the schools to join the Keene musical appreciation course, which furnishes a circulating library of talking machine records and an interesting series of lessons to accompany them.

Teachers' Meetings and Helps.

During the summer vacation a two weeks' summer school for the teachers of the district was held in Marlboro. Of the 49 teachers in attendance, 6 were from Wilton. The subjects of the morning sessions were "History of Education," "Psychology," "School Management," "Primary Arithmetic," "Reading," "Cultural English," "Technical English," "Seat Work," and "Science." Afternoon sessions included daily practice in sight singing and drawing and in the evening a course in music appreciation and a number of entertainments were provided.

No other meetings have been held this year, except for the teachers in the high school building and a meeting conducted by the State Department. Several meetings are scheduled for the spring term with the following topics:

Taylor's Principles of Scientific Management and their school room application.

Vizual Mathematics.

New Light on the Psychology of Interest, with devices.

Teaching How To Study, with seat work devices for grammar grades.

With a view to stimulating interest in neighboring schools and in the good ideas of other teachers, the writer has collected samples of pupils' work and passed them on to other places. Teachers are thus able to keep somewhat in touch with each other and to judge their own work by others' standards.

A Teachers' Registration Bureau.

One of the most important parts of a superintendent's work is to be able to advise in regard to the employment of new teachers. Ordinarily, where salaries are low, the superintendent is forced either to choose from among his own acquaintances and the few candidates who happen to apply, or else call upon the teachers' agencies to furnish applicants whose records they have investigated. If he depends wholly upon his own lists he is forced to accept a good many who are incompetent. If the agencies are consulted, salaries are reduced 5 percent, for that is the regular commission of the agencies. This charge does not appear on the records as one of the town's expenses for it is paid by the teachers, yet in the

end the town must bear the burden, for it must offer these candidates pay enough to cover both a salary and a commission.

The writer has attempted to correct this difficulty to some extent by establishing a bureau, supported by a number of towns, where applications are received and the qualifications of candidates investigated. The information is kept on file for the use of anyone who may have a vacancy. In this way the work of the agencies is accomplished with very little expense. The plan makes it easier for teachers to find places, and it enables committees to select the best candidates available at the salaries they can pay. Twenty-two towns have united with this one. One hundred and twenty-five teachers have registered. Four high school and twenty-five grade teachers have been given positions. The entire expense has been less than an agency's commission would have been on one of the high school candidates.

An Exchange.

In educational circles a good deal has been said recently about "surveys" or investigations of a city's school system by a corps of outside experts who study the various schools in detail with a view to measuring and unbiasedly rating their actual efficiency. Something of the advantages of a "survey" might be secured in a rough way by two superintendents changing towns and each making a report on conditions as he finds them in his neighbor's territory. At least the scheme would afford an interesting glimpse at the situation from another's standpoint. Plans are under way in this town for such an exchange for a short time with a neighboring superintendent.

A Parents' Association.

Whatever the system and methods in vogue and whoever is chosen to administer them, the final burden of responsibility rests with the citizens. The schools will be as good as the people demand, and as poor as the people will tolerate. This does not mean that mere faultfinding will accomplish much, especially the vague, indefinite kind that springs from personal disfavor or poor digestion. But a constructive interest that is willing to spend a little time in studying educational matters, to learn what can be done and what ought to be done and to lend support to the wisest and best means of improvement can accomplish more than any other factor in school administration.

With the hope of interesting parents and others in an organization for the study and improvement of the schools we have sent letters to a good many in the district, describing the purpose of a school improvement association and inviting their

co-operation. Such societies, meeting once a term or oftener to hear speakers and discuss educational topics, have been of great interest and service in other parts of the State, and are likely to accomplish as much here. Considerable outside talent is available for such meetings. There are always local topics that come in for attention. If the gatherings did no more than bring teachers and parents together for a few minutes' discussion of their common problem the work would be worth the effort. As fast as there seems to be interest enough manifested in the various neighborhoods meetings will be scheduled and societies organized.

Teachers' Reports.

Detailed reports, collected from the teachers at this time, show that, with two exceptions, janitor service is satisfactory, the schools being comfortable when the pupils arrive, and the closets and rooms kept clean. There is comparatively little illegal absence, but the record for tardiness is high, and the majority of cases reported as those that could have been easily avoided.

A report of the time teachers have spent repairing and varnishing books, studying supplementary material in connection with their lessons, Palmer writing practice, conference and correspondence with parents, and assisting in games and special exercises of the pupils, shows that there is much in addition to the regular work of the classroom that many of our teachers do gladly and without compulsion.

With sincere appreciation of much you have done to make the year's work pleasant and effective, I remain,

Respectfully yours,

FRANK M. RICH, Supt.

Wilton, Feb. 16, 1914.

REPORT OF PRINCIPAL OF HIGH SCHOOL

To the Superintendent of Schools:

I have, for the first time, the honor of submitting a report covering the work of an entire year. The teachers have been diligent and faithful in the work and have been successful in keeping an enthusiastic spirit aroused in the pupils.

Last June seventeen were graduated out of a membership of seventy-one. This is the largest class ever graduated in the history of the school. The present enrollment numbers fifty-eight, twenty-two of whom are in the first year. A new high school in Hancock drew at least one prospective tuition pupil away from Wilton.

Attendance is high considering the fact that many pupils come from a distance of several miles.

The work done compares favorably with that of other schools. This school was placed on the approved list of the Worcester Polytechnic Institute last year and continues to maintain the standard required to satisfy its demands.

The state program is followed in so far as possible, and the standing of the school is such that approval could be obtained from the New England College Entrance Board if the number of students going to college were sufficient to warrant our application for the certificate privilege.

Greater laboratory facilities are a necessity. I strongly recommend the installation of this urgently necessary room. In my opinion there is unused space in the basement ample for this need.

In closing, I am in sympathy with the Parent-Teachers' Association and sincerely hope that it may be promptly organized and may increase the number of parent-visitors to the school.

Respectfully submitted,
C. O. DAVIS, Principal.

REPORT OF SUPERVISOR OF MUSIC

To the Superintendent of Schools:

Sir:—The system of music instruction we are trying to establish in the grades aims first to enable the children, when they enter the high school, to read ordinarily difficult music at sight; and, second, to help them become familiar with some of the good things in music that every educated person ought to know.

As to methods—each teacher is given an outline of work for the term. This outline is divided into two parts, sight work and song work. The sight work consists of exercises from the book, from the board and from the Weaver slips. The exercises are sung by syllable and are usually sung but once. They are intended primarily to develop the power of sight reading. The songs are sung by syllable until they are learned, then the words are used. In addition to the work mentioned, special technical lessons are given as the need for them arises.

One feature of the music which is particularly interesting is the work with monotones. Each week they receive a little special attention, and already several pupils who were unable to sing but one tone at the beginning of the year are now singing five. Most of the others have improved to some degree. This difficulty is not usually serious if attended to properly in the lower grades but becomes harder and harder to help as the pupils grow older.

Individual help for a few minutes each week is also given to all who for any reason are not up to grade or find any part of the work especially difficult. Thus the whole is made more efficient by strengthening the individual parts.

By dividing my time equally between the outside schools and the village, the district schools are given the same advantages as the graded.

I desire at this time to testify to the hearty support and co-operation given by all the teachers.

Respectfully submitted,

• AGNES GENIEVE GARLAND,
Supervisor of Music.

REPORT OF BOARD OF ENGINEERS

We beg to submit the following report:

On hand Jan. 1st, 1914: Three hose carriages, 1000 feet hose, one 45 gallon American La France Chemical engine, 12 six gallon Babcock extinguishers, and 6 three gallon chemicals; 18 fireman's coats, three Eastman nozzles and extra tips, three hydrant gates, one ladder truck, the Excelsior fire engine; The Flying Squadron, consisting of a 60 h. p. Alco car. This car is fitted with two ladders, one roof and one extension ladder, 2 six gallon and 3 three gallon extinguishers, 200 feet hose with Eastman nozzle and all connections, axes, and lanterns, making a first class equipment.

FIRE LOSS

The fire loss the past year has been very slight. There were a number of alarms, the majority being for chimneys. The promptness of the firemen and the use of the Flying Squadron have reduced the loss by fire to a minimum. The Flying Squadron has responded to 23 alarms during the short time it has been in commission and it is the firm belief of the firewards that the town never expended money to better advantage. The firewards wish to thank the Excelsior Hose No. 1, Souhegan Hose No. 2 and Eagle Hose No. 3 for their timely gift of twenty-five dollars each to help fit up the machine. The alarm system at the Central telephone station and Whiting's mill still renders fine service.

THE NEEDS OF THE DEPARTMENT

The department needs a telephone in the central station, more hose, small chemicals, and a few minor improvements to the Flying Squadron. The fire engineers have placed the No. 1 hose wagon in the town hall annex to be used in case the central fire station is threatened by fire.

The central station under the stewardship of Daniel Mahoney is in excellent condition.

WHERE LARGE CHEMICALS ARE LOCATED

A. L. Curtis' farm, W. A. Burton, Chas. E. Wright, Henry Blanchard, O. H. Frye, Frank Gray, George M. Batchelder, Frye Bros., Geo. Chandler, Geo. Badger and two on Flying squadron.

We wish to thank everyone who has helped in the past year to make this department what it is at the present time.

Respectfully submitted,
FRANK E. PROCTOR,
DANIEL M. BRENNAN,
P. J. BALCOMB.

REPORT OF FIRE WARDEN

There were six alarms for forest fires during the year.

April 25, Mt. Calvary cemetery.

June 19, near Hickey farm.

June 19, near Wilton gun club.

July 4, Across the river near H. V. Tuttle's.

Aug. 21, Bray and Frye land, West Wilton, (two alarms.)

There were a number of forest fires which we attended but as Boston & Maine paid all the bills we made no account of them.

The use of the (so called) Flying Squadron has kept the loss by forest fires down very low.

I wish to thank all who have in any way helped to keep the forest fire loss down to such a low figure when the towns all about us have bills many times larger than ours.

In order to make this department more efficient I will name my Deputies in town so that if you live in their district report a fire to them at once, or to me:

Frank Gray, George W. Perham, William A. Burton,
Stanley H. Abbot, Orville H. Frye.

Respectfully submitted,
FRANK E. PROCTOR,
Forest Fire Warden.
